

My stress ball

A stress ball is something you can squeeze when you are feeling stressed or anxious. See full instructions at <https://projects.raspberrypi.org/en/projects/stress-ball/>.

See the finished project at <https://scratch.mit.edu/projects/680148004/>.

Draw or choose a sprite, and add the code on the left to make your stress ball squawk! Or change fisheye for a different effect.

You can change the sizes and choose different sounds too.
