

Bug infestation!

- Choose a bug sprite, and click 'Make a block' in My Blocks. You can call it 'go' for short.
- Add the pen extension (click the purple box in bottom left of screen) – this brings in some of the blocks we will use below.

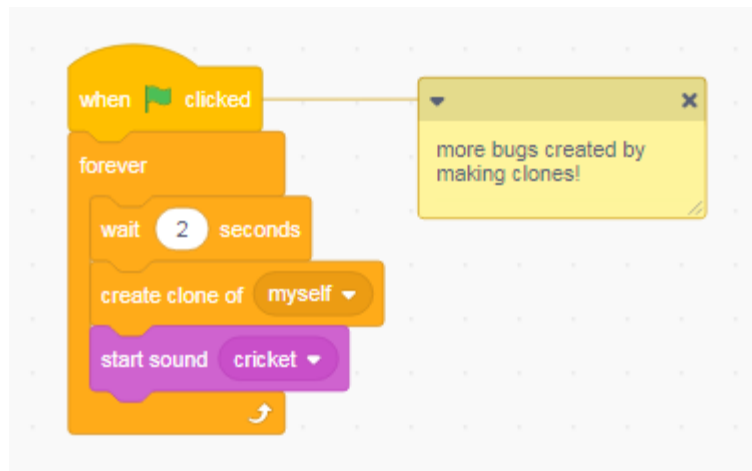

- Then add the starting code, and test it out:

You should have a bug that moves around the screen and leaves a trail.

Save your project!

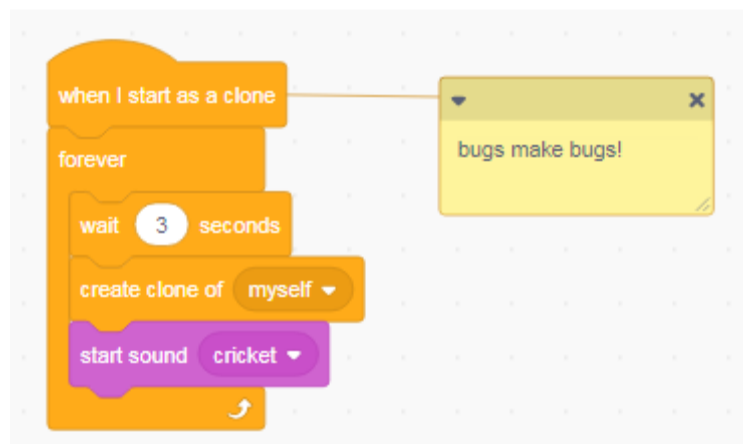

- Make more bugs...

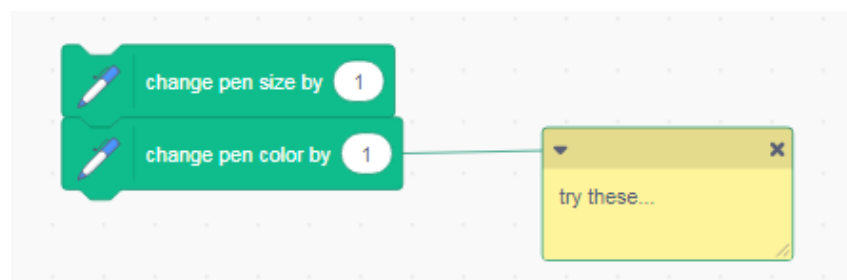

- ... make them move...

- ... and clones make bugs!

- More things to try:
