

Dance band!

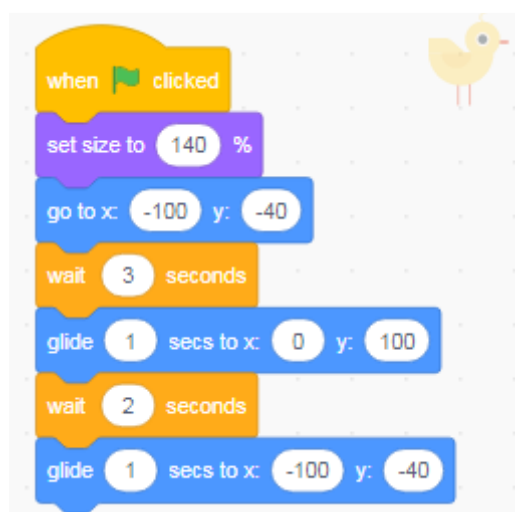

This project adds movement and other effects to the Space Band.

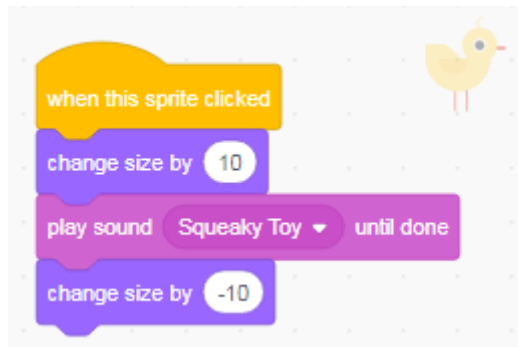

- Use my code blocks as ideas, it is ok to change things around to make the code your own.
- If you are not sure what a block does, try it out!

Step 1: Chick

- We are using two 'hat' blocks – the green flag starts all your code.
- When the green flag is clicked, the chick goes to look out of the window!

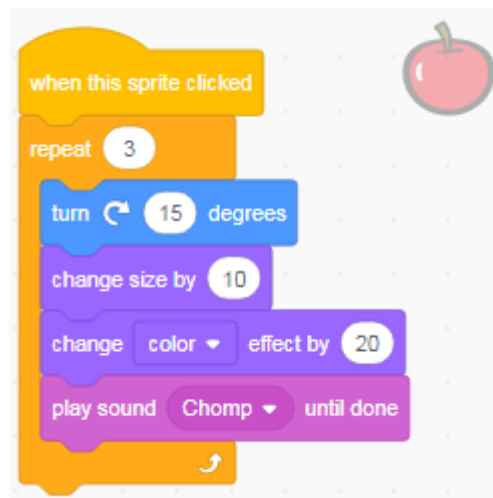

- When the chick sprite is clicked, it changes size, makes a squeak, then changes back again.

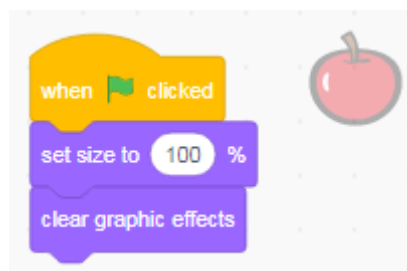

Save your project

Step 2: Apple

- The apple uses a 'repeat' loop to make four things happen, three times over!

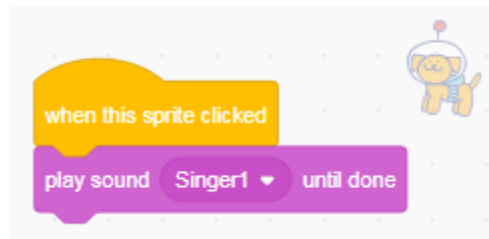

- This code sets things back to normal at the start of your project:

Step 3: Dot

- Dot the space dog still sings if you click on her:

- The code below starts her in the right place, then she says something, and bounces about forever!

- You can see my finished project at <https://scratch.mit.edu/projects/1169335873/>
- What ideas can you add to your band?
